Pass Task: Draft Learning Summary

Overview

There are two sections, **Portfolio Overview** and **Reflections** in your Learning Summary Report. Your final Learning Summary Report will be directly evaluated in your portfolio. **This task 10.1P** asks for your **draft** of your learning summary report. It provides you an opportunity to get **feedback** on the **Portfolio Overview section** of your Learning Summary Report if your draft is submitted on-time like the practice applied to other tasks.

- The **Portfolio Overview** section lets you outline how your work attached into the portfolio has demonstrated that you have met all the unit's learning outcomes with good quality work, aligning with your target grade you believe you have demonstrated in your portfolio. This section enables you to justify why you should be awarded your target grade based on the work you have completed and submitted, and what you have achieved in the unit that fully fulfilled the unit's assessment aligning to learning outcomes criteria. (Get the unit learning outcomes from the Unit Guide.)
- The Reflections section allows you not only review and revisit, but also reinforce your knowledge and skills attained in your whole learning journey in the unit. This section enables you to elaborate/demonstrate how your programming knowledge and skills have been improved/built up in the trimester.

Please note that the Learning Summary Report is a part of your portfolio, not your portfolio. Please make sure to review the instructions on how to create your portfolio for this task.

Submission Details

Submit a PDF of your Learning Summary Report for feedback, and make sure you are aware of the process for creating your portfolio.

Instructions

1) Download the template for the Learning Summary Report from the task resources and prepare a first draft. Read through the notes in the template.

- The Learning Summary Report has a crucial impact on your final results. This is the document where you make a case that you should be awarded a certain grade. The more clearly you can demonstrate good quality work in this document, the better marks you are likely to receive. Aim to be clear and concise and refer to the work included in your tasks to demonstrate your understanding and achievements.

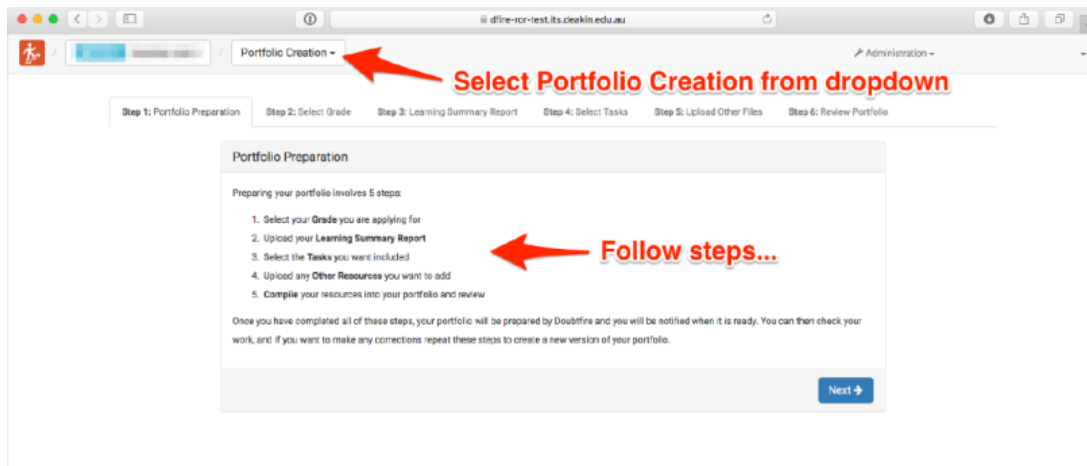

- Also keep in mind that at this stage you are working on a draft, you will get feedback on Portfolio Overview section in 10.1P on-time submission and can use that feedback to improve your report for inclusion in your portfolio.
- The Learning Summary Report will go at the start of your portfolio. It will be followed by all of your tasks: the programs, hand executions, report, diagrams, etc. In this summary just refer to the other pieces included in your portfolio rather than re-writing them here. Think of this like an index referring the reader to the tasks that demonstrate your achievements.

2) Submit the draft for feedback by the TASK due, and it will be signed off as complete with feedback.

Also make sure you know how to create your portfolio for assessment in the unit which is shown below.

Creating your portfolio

The assessment for this unit is by portfolio, so now you should be starting to think about putting all of your tasks together into your portfolio for final submission. This is where all of your tasks are finally assessed in order to determine your final grade and mark!

You must use the Portfolio Creation tool on OnTrack to guide you through the steps needed to create your portfolio. This will combine all of your work related to the tasks with the final version of your learning summary report. Once it is created you can download it and review it to make sure that you have included all of the aspects you think show off what you have achieved. Once your portfolio is available in OnTrack you can consider it submitted – the portfolio assessors can access and grade it within OnTrack.

Although you don't have to submit your OnTrack portfolio anywhere else as your created/generated portfolio will be evaluated directly on the OnTrack platform by the portfolio assessors, it is highly suggested you download the generated portfolio PDF for your own record.

Good luck with your portfolio!
